(57) Abstract:

PURPOSE: To secure the pleasant application of a telephone by storing previously tone quality/volume setting information and schedule information in an information memory part and collating time count information on a time count part with the schedule information through a collation part to output the tone quality and the tone volume as desired.

CONSTITUTION: A user supplies incoming tone quality/volume setting information and schedule information by means of a dial 12 and various operation buttons 14 and stores them in an information memory part 10. Then the schedule information is read out of the part 10 and then the incoming date is read out of a time count part 8 when an incoming call is received later. A collation part 9 collates the date with the schedule information and the incoming tone quality/ volume setting information is read out of the part 10 in response to the result of said collation. Then the tone quality and the tone volume are set under prescribed conditions by an incoming tone quality/volume switching part 7. Then a sounder 13 is actuated.
